BENYAMIN HOSSEINZADEH Senior Front-End Developer

benyamin.hosseinzadeh.dev@gmail.com | +989366881487 | Tehran | linkedin.com/in/benyamin-hosseinzadeh-dev

SUMMARY

Senior Front-End Engineer with 5 years of experience building production React, Next.js, and TypeScript applications across fintech, education, and enterprise dashboards. Experienced in BNPL checkout, collateral onboarding, reusable workflow components, frontend access control, and incremental modernization of legacy JavaScript applications. Combines product delivery with diagnosing ISR and navigation failures, optimizing rendering and data fetching, customizing shared components through design-system tokens, and mentoring junior developers through code reviews, onboarding support, and practical assignments.

EXPERIENCE

Firouzeh Financial Group (Turquoise Partners), Senior Front-end Developer 10/2025 – Present | Tehran, Iran

- Built the Merchant Dashboard from scratch in TypeScript using the team's shared frontend template, integrating TanStack Table with server-side pagination for transaction data.
- Implemented attribute-based access rules across service routes, nested pages, and user actions; combined token permissions with transaction status to control refund availability in coordination with backend authorization.
- Built the CPG BNPL checkout frontend from scratch in TypeScript, covering OTP login, wallet and payment-method selection, upfront payments, installment previews, PSP redirects, callback receipts, and backend-directed returns to merchants.
- Created a Context-based step manager for ETF collateral onboarding, coordinating backend stages with four frontend steps, validation, independent instances, and expiry resets; resumed the flow after Setareh callbacks by refreshing backend onboarding data.
- Incrementally migrated legacy BackOffice components and API services from JavaScript to TypeScript, documenting previously unclear code to improve readability and maintenance.
- Diagnosed stale fund and PMA pages on firouzeh.com, fixed environment-variable handling that broke ISR refreshes, and replaced hardcoded fund/PMA logic with backend-driven rendering so new entries required no frontend changes.
- Optimized owned features and shared components using React Profiler, code splitting, lazy loading, and state refactoring; tuned React Query caching and stale times, prefetching, and optimistic updates to improve rendering and data-fetching efficiency.
- Resolved navigation-history loops in the Firouzeh app and improved modal and drawer accessibility through ARIA labels and keyboard interactions; used Sentry and Lighthouse to investigate production issues and assess frontend quality.

Sepehr Academy, Front-end Developer 06/2023 – 10/2025 | Sari, Iran

- Developed course, payment, and admin user-management features for a custom CMS alongside other frontend developers, contributing to React, Next.js, and TypeScript applications.
- Customized shadcn/ui components with design-system tokens and variables to align course, payment, and administration interfaces with shared UI patterns.
- Mentored junior developers through code reviews, onboarding support, and learning assignments; also mentored three React bootcamp teams with two to three members each.

Apanco, Front-end Developer 12/2021 – 06/2023 | Sari, Iran

- Standardized asynchronous Redux flows by normalizing API response data and enforcing consistent data, loading, and error contracts, addressing recurring failures from unsafe nested access, inconsistent state shapes, and API/authentication errors.
- Developed dashboard interfaces for the University of Mazandaran's guard-management system and implemented authentication and settings features for Tanesh, integrating React and Material UI with REST APIs.
- Built cookie-based authentication interceptors with 401-triggered token refresh, queued API requests while refreshing, resumed pending requests with the new access token, and centralized API error handling and retries.

TECHNICAL SKILLS

- **Languages:** TypeScript, JavaScript (ES6+), HTML5, CSS3
- **Frontend & Frameworks:** React, Next.js (App Router, Pages Router, SSR, SSG, ISR), React Hook Form, Zod
- **State Management & Data:** TanStack Query, Redux Toolkit, Zustand, Context API, REST APIs, Axios, Advanced Data Tables
- **Testing:** Vitest, React Testing Library, Unit Testing, Integration Testing
- **UI & Styling:** Tailwind CSS, SCSS, Ant Design, Material UI, shadcn/ui, Responsive Design, Design Systems, Design Tokens
- **Architecture & Security:** Feature-Based Architecture, API Contract Validation, JWT Authentication, Access Control (RBAC/ABAC)
- **Performance & Tooling:** React Profiler, Core Web Vitals, Lighthouse, Code Splitting, Lazy Loading, CI/CD, Jenkins, Git, Sentry
- **AI-Assisted Development:** Claude Code, OpenAI Codex

EDUCATION

Computer Software Engineering, Azad University
